About Me

I'm a technical professional with a background in software development, illustration, design, and technical support. I enjoy building products that are clear, intuitive, and thoughtfully designed, whether that means developing features, improving interfaces, or helping customers get the most out of them.

Experience

Support Engineer - Rebuy June 2025 - Present

- Reproduce, investigate, and resolve complex technical issues for Shopify merchants using Rebuy, isolating root causes across product logic, data sources, and platform behavior to determine whether issues originate in Rebuy, Shopify, or merchant configuration.
- Troubleshoot rule-based recommendation and discount logic, analyzing how product, collection, and behavioral data influences widget outputs and identifying misconfigurations or edge-case behavior.
- Use browser developer tools (Network tab, request inspection, and request blocking) to validate data flow, confirm whether APIs and rule engines are executing as expected, and isolate frontend vs backend failures.
- Communicate technical findings to merchants through chat-based support, explaining system behavior, guiding configuration changes, and maintaining over 95% CSAT.
- Escalate edge-case or confirmed product bugs to senior support and engineering teams with detailed reproduction steps, system context, and debugging insights.

Software Engineer 1 - ExecOnline, Inc August 2022 - January 2024

- Built type-safe APIs connecting Ruby on Rails services with React applications using TypeScript, functional programming patterns, MobX, and Decoders, reducing frontend runtime errors.
- Built frontend features in React and TypeScript to support the company's transition to a SaaS platform, expanding customization options for customers.
- Rebuilt a core area of the platform, working closely with teammates to deliver a critical project and receiving a company award for collaboration and dependable execution.
- Triaged and resolved hundreds of Honeybadger alerts, fixing recurring issues and eliminating thousands of redundant error notifications.
- Added and maintained localization support across new and existing features, ensuring the application was available in multiple languages.

Associate Software Engineer - ExecOnline, Inc May 2021 - August 2022

- Partnered with the Director of UX on a platform-wide brand refresh, consolidating SASS stylesheets, refactoring CSS variables, and updating fonts, logos, imagery, and shared design patterns throughout the application.
- Improved accessibility by updating semantic HTML and validating functionality with VoiceOver, helping the product achieve WCAG AA compliance.
- Modernized key client-facing pages by replacing legacy HAML views with React and TypeScript, reducing load times, eliminating full-page reloads, and improving the experience for more than 10,000 active users.

Other Skills

Languages & Frameworks
JavaScript (ES6+), TypeScript, React, Ruby, Ruby on Rails, Node.js, Express.js, HTML5/CSS3
Tools & Platforms
Git, GitHub, Docker, AWS (S3), Honeybadger, Netlify, Render, Heroku
Design & Collaboration
Figma, Adobe Photoshop, Adobe Illustrator, Inkscape, Jira/Confluence, Google Workspace, Slack

Education

Full-Stack JavaScript Web Development Certification - V School
Bachelor of Science, Art and Visual Communication - Utah Valley University
Associate in Applied Science, Digital Communication Technology - Utah Valley University
